Candidates answer on the Answer Booklet

#### **OCR Supplied Materials:**

- 8 page Answer Booklet
- MEI Examination Formulae and Tables (MF2)

#### **Other Materials Required:**

· Scientific or graphical calculator

Friday 11 June 2010 Morning

**Duration:** 1 hour 30 minutes

#### **INSTRUCTIONS TO CANDIDATES**

- Write your name clearly in capital letters, your Centre Number and Candidate Number in the spaces provided on the Answer Booklet.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully and make sure that you know what you have to do before starting your answer.
- Answer all the questions.
- Do **not** write in the bar codes.
- You are permitted to use a graphical calculator in this paper.
- Final answers should be given to a degree of accuracy appropriate to the context.

# **INFORMATION FOR CANDIDATES**

- The number of marks is given in brackets [] at the end of each question or part question.
- You are advised that an answer may receive no marks unless you show sufficient detail of the working to
  indicate that a correct method is being used.
- The total number of marks for this paper is 72.
- This document consists of 4 pages. Any blank pages are indicated.

# Section A (36 marks)

- 1 Evaluate  $\int_0^{\frac{1}{6}\pi} \cos 3x \, dx.$  [3]
- Given that f(x) = |x| and g(x) = x + 1, sketch the graphs of the composite functions y = fg(x) and y = gf(x), indicating clearly which is which. [4]
- 3 (i) Differentiate  $\sqrt{1+3x^2}$ . [3]

(ii) Hence show that the derivative of 
$$x\sqrt{1+3x^2}$$
 is  $\frac{1+6x^2}{\sqrt{1+3x^2}}$ . [4]

4 A piston can slide inside a tube which is closed at one end and encloses a quantity of gas (see Fig. 4).

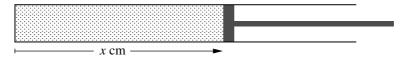

Fig. 4

The pressure of the gas in atmospheric units is given by  $p = \frac{100}{x}$ , where x cm is the distance of the piston from the closed end. At a certain moment, x = 50, and the piston is being pulled away from the closed end at 10 cm per minute. At what rate is the pressure changing at that time? [6]

5 Given that  $y^3 = xy - x^2$ , show that  $\frac{dy}{dx} = \frac{y - 2x}{3y^2 - x}$ .

Hence show that the curve  $y^3 = xy - x^2$  has a stationary point when  $x = \frac{1}{8}$ . [7]

6 The function f(x) is defined by

$$f(x) = 1 + 2\sin 3x, \quad -\frac{\pi}{6} \le x \le \frac{\pi}{6}.$$

You are given that this function has an inverse,  $f^{-1}(x)$ .

Find 
$$f^{-1}(x)$$
 and its domain. [6]

- 7 State whether the following statements are true or false; if false, provide a counter-example.
  - (i) If a is rational and b is rational, then a + b is rational.
  - (ii) If a is rational and b is irrational, then a + b is irrational.
  - (iii) If a is irrational and b is irrational, then a + b is irrational. [3]

# Section B (36 marks)

8 Fig. 8 shows the curve  $y = 3 \ln x + x - x^2$ .

The curve crosses the x-axis at P and Q, and has a turning point at R. The x-coordinate of Q is approximately 2.05.

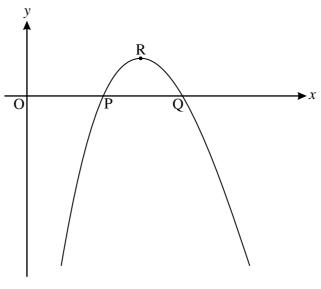

Fig. 8

(i) Verify that the coordinates of P are (1, 0).

- [1]
- (ii) Find the coordinates of R, giving the y-coordinate correct to 3 significant figures.

Find 
$$\frac{d^2y}{dx^2}$$
, and use this to verify that R is a maximum point. [9]

(iii) Find  $\int \ln x \, dx$ .

Hence calculate the area of the region enclosed by the curve and the x-axis between P and Q, giving your answer to 2 significant figures. [7]

# [Question 9 is printed overleaf.]

9 Fig. 9 shows the curve y = f(x), where  $f(x) = \frac{e^{2x}}{1 + e^{2x}}$ . The curve crosses the y-axis at P.

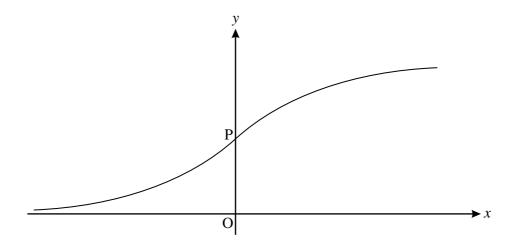

Fig. 9

(i) Find the coordinates of P.

[1]

(ii) Find  $\frac{dy}{dx}$ , simplifying your answer.

Hence calculate the gradient of the curve at P.

[4]

(iii) Show that the area of the region enclosed by y = f(x), the x-axis, the y-axis and the line x = 1 is  $\frac{1}{2} \ln \left( \frac{1 + e^2}{2} \right)$ . [5]

The function g(x) is defined by  $g(x) = \frac{1}{2} \left( \frac{e^x - e^{-x}}{e^x + e^{-x}} \right)$ .

(iv) Prove algebraically that g(x) is an odd function.

Interpret this result graphically.

[3]

[6]

- (v) (A) Show that  $g(x) + \frac{1}{2} = f(x)$ .
  - (B) Describe the transformation which maps the curve y = g(x) onto the curve y = f(x).
  - (C) What can you conclude about the symmetry of the curve y = f(x)?
